The Right Tools for the Job

- Complementary ship & AUV capabilities to prospect for cold seep environments
- Integrated datasets provide baseline data enabling more effective and efficient future sampling operations

The EX1205L1 Blake Ridge Exploration shipboard (right) and shore-based (below) team pose with the Sentry AUV.

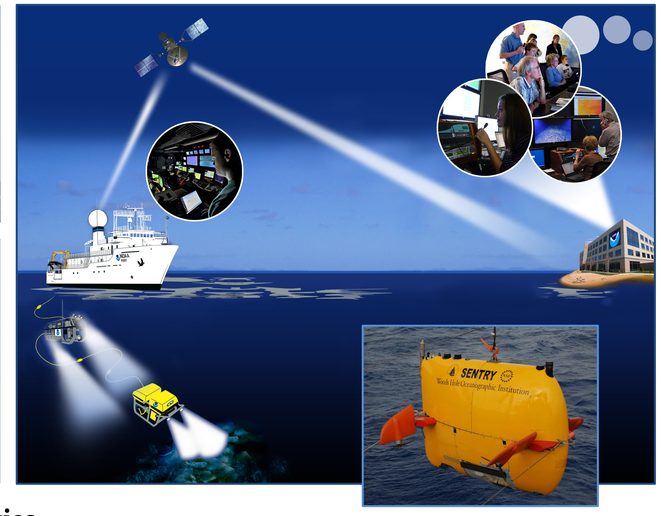
Expedition science leads, students and operations personnel go over recently collected data from NOAA Ship *Okeanos Explorer*.

Strength of an Expanded Shore-based Team

- Expanded labor force increases daily man hours
- Additional multidisciplinary skill sets
- Greater intellectual capital
- Higher level of data processing and analysis between ship and shore leads to more efficient use of AUV bottom time

Cruise Objectives: Test and assess the integration of an AUV into telepresence-enabled operations on NOAA Ship *Okeanos Explorer*, with the core science team based on shore at the highly functional URI Inner Space Center

- Survey the Blake Ridge and Cape Fear Diapir areas for cold seep communities, to support a 2013 NSF-funded cruise
- Conduct a series of engineering tests and trials with the Sentry AUV, including remote operations



Telepresence Opportunities

- Ability to expand capabilities through direct access to expertise and skill sets of shore-based participants
- Training the next generation of scientists, engineers, educators and technicians from a highly functional shore-based facility
- Additional AUV testing opportunities: remote start-up and launch, diagnostic tests, operating with a key team member ashore
- Opportunity to engage the general public through live streaming video on commodity Internet and through a variety of education and outreach efforts

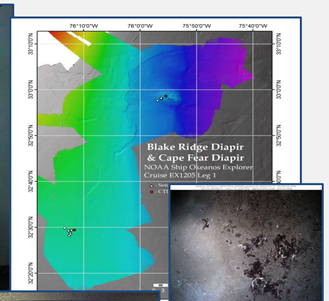
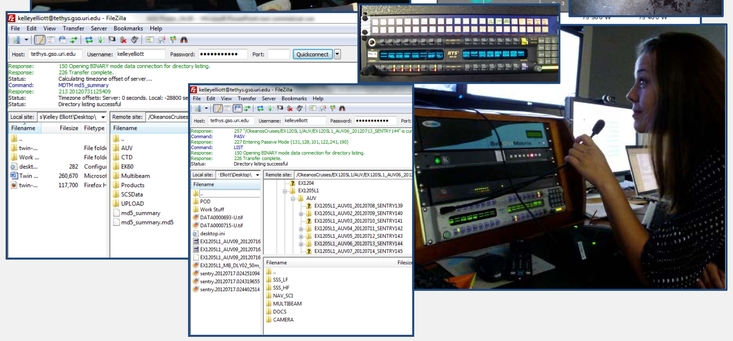
Keeping Everyone "in the know"

- Real-time video and data feeds to shore
- Daily products and communications provide situational awareness
- Regular ship/shore data transfers





Ship-to-Shore Operations, Planning & Workflow

- Mission critical scientists and technicians onboard, principal investigator and core science team onshore
- Daily ship-to-shore science meetings & communications enables shore-based team to guide day-to-day at-sea operations
- Internet-based communications and collaboration tools
- Developed standardized products and workflow
- Daily schedule

Acknowledgements: Supported by NSF OCE-1031050 to CLVD and by NOAA's Office of Ocean Exploration and Research. A huge thanks to the CO and crew of NOAA Ship *Okeanos Explorer*, and the at-sea science team: Senior Scientist L Brothers, Telepresenence Lead W Pinner, Co-Mapping Leads E Lobecker and A Skarke, AUV Lead C Kaiser, AUV Team Members A Billings, J Fuji, and A Duester, and support team members B Bingham, J Carlson, L Van Uffelen, Video Engineer R Brian, Video Team Member T Smithee, CTD Tech J Sheehan, Data Technician B Reser and Mapping Intern D Paxton. The success of this expedition was made possible by the incredible participation of our shore-side team: Principle Investigator CL Van Dover, Science Leads C German and D Yoerger, PhD students M Shimizu, J Wagner, S Sharuga; MFA Student P Brubaker; Undergraduate Interns M McEntee, Z McKelvey, A Chubet and M Jones. A big thank you to C Scanlon and R Waller for providing science input during the engineering dives, and J Kinsey for being a remote AUV engineering test bunny. This expedition would not have been possible without the incredible shore-side support of the Inner-Space Center Technical Team.
